Subject: Bridgeton Athletic Complex

Chris,

Thanks for the press release on the results of the surface radiation screening at the Bridgeton athletic complex. While getting a response to the results, a few questions came up and I was hoping to get some answers from you.

-Did the screening test for alpha and beta radiation? If not, why not?

-Was the screening able to tell you whether the low levels of gamma radiation were coming from the same material that's buried at Westlake landfill? Will the tests on the soil samples be able to do that?

-Is the piece of equipment that was used by the moms group more technologically advanced than the one used in the screening by the EPA?

Thanks,
Russell Kinsaul
